### EGVA

For more than 35 years, EGVA has specially targeted its activities in ski lifts security. Our products are mainly aimed at monitoring risks related to chair lifts and ski lifts exploitation. More specifically, we focus our production on tractive ropes monitoring tools.

We do have a customer-oriented approach, which is based on both trust and partnership. We thus have a special knowledge of how to answer your questions and how to meet your needs, by producing high-quality devices that range every official control demand. We supply simple, reliable products, that comply with actual European rules

Granted with ISO 9001 certification since 1996, we are committed in the whole fabrication process of the products we offer: from conception to production, distribution (Europe, Canada, USA...) and after-sales service.

### Products

**Line Monitoring Systems** **CE**  
DRVA-Dual

**Derailment Detectors DDTP** **CE**

Others products : Detectors, Gate, Lightning protection, Anemometers, ...

### Our Concept

In order to face the challenge of supplying industrialised security goods to very targeted clients in the whole world, EGVA has developed a range of products that made us recognised as a leader in the tractive ropes security industry.

The results are:

- products that match the needs of users (reliability, easy maintenance...)
- products that are based on a high-quality technology and ensure long-term endurance
- products that allow users a total control over them.
